Prof. Dharmik Vasiyani

Subject: 2301CS202 – Web Designing

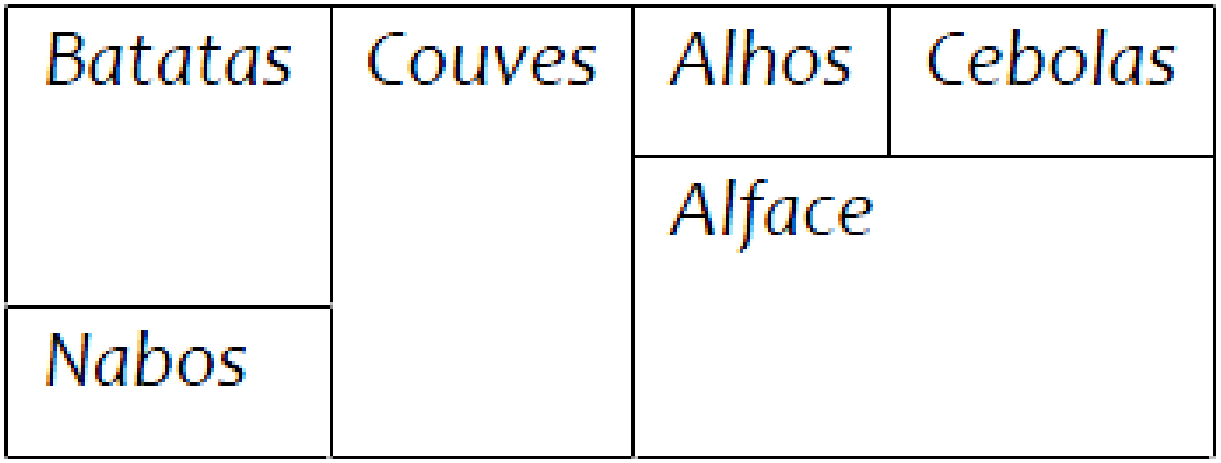

Lab Manual

Lab No	Practical
1	**Exploring Popular Websites to Understand Web Design Basics & Case Study on the basic Internet Protocol.** 1. Open the following websites using a desktop or laptop browser: a. www.flipkart.com b. www.myntra.com c. www.irctc.co.in 2. Observe and note the following design aspects for each website: a. Page layout structure: header, navigation bar, main content, footer b. Use of images, text, colors, fonts, and white space c. Placement of buttons and links d. Mobile vs Desktop view (optional: use browser inspect tool or a mobile device) e. Responsiveness and user-friendly elements 3. Prepare a comparative report or table mentioning: a. Features you liked/disliked b. Which website had the best design and why **c.** What design ideas or components you would reuse in your own website 4. Understanding Internet and Web.(A) 5. Explore different web browsers and search engines.(A) 6. Identify and explain common internet protocols (HTTP, HTTPS, FTP).(B) 7. Understanding HTTP requests and responses.(B) 8. Demonstrate client-server communication using HTTP requests (GET, POST).(C) 9. Demonstrate HTTP Response Status Codes.(C)
2	**Demonstrate HTML tags & HTML controls** 1. Create an HTML page that demonstrates the use of text formatting tags such as <b>, <i>, <u>, , and .(A) 2. Design a webpage that displays mathematical and chemical expressions using <sup> and <sub> tags (e.g., H₂O, x²).(B) 3. Create an HTML document that shows the use of <pre> and <code> tags to display preformatted text or code snippets exactly as typed.(C) 4. Design a webpage that organizes content using different heading tags (<h1> to <h6>) and <p> for paragraphs.(A) 5. Address, B, U, I, Blockquote, Marquee, Link, Meta.(A) 6. Anchor tag, Image control.(B) 7. Iframe tag.(B) 8. List controls.(C)
3	**Make the table of the following design using HTML.** **Part : A** **Part : B**

Part : C

	
5	**Demonstrate HTML5 Semantic Tags and Form Validations.** 1. Create an HTML5 page using semantic tags like <header>, <nav>, <main>, <article>, <section>, and <footer> to structure the layout of a simple website. (A) 2. Develop a contact form using HTML5 form elements such as <input type="email">, <input type="tel">, <input type="date">, and <textarea>. (A) 3. Create an HTML form with fields like Name, Email, and Phone Number using the required attribute to ensure the user cannot submit without filling them. (B) 4. Design a registration form that uses type="email", type="number" and pattern attributes to validate email format, number ranges, and custom patterns (e.g., password rules). (B) 5. Create a feedback form where minlength, maxlength, min, and max attributes are used to control input length and numerical value range. (C)
6	**Apply Meta tags and Multimedia tags.** 1. Create a simple HTML webpage that uses basic meta tags such as description, keywords, author, and viewport. 2. Design a webpage that implements meta tags to automatically refresh after a few seconds, and specify the character encoding using the charset meta tag. 3. Develop a webpage that embeds an audio file using the <audio> tag with controls, autoplay, and loop attributes. 4. Design an HTML page that displays a video using the <video> tag with features like controls, poster image, and multiple source formats. 5. Create a webpage that demonstrates the use of <embed>, <object>, and <iframe> tags to display external multimedia content like PDFs, YouTube videos, and interactive maps.
7	**Demonstrate the selectors.** 1. Create an HTML page that applies different styles using basic CSS selectors: element selector (p), class selector (.className), and ID selector (#idName). (A) 2. Design a webpage that applies common styles to multiple elements using the group selector (h1, p), universal selector (*), and descendant selector (div p). (B) 3. Create a webpage that shows the use of: a. Child Selector (ul > li)

	b. Adjacent Sibling Selector (h2 + p) c. Attribute Selector (input[type="text"]) to target specific elements and apply CSS rules. (C)
8	**Design the given web pages using the div tag and CSS properties.** **Part: A**  **Part: B**  **Part: C**

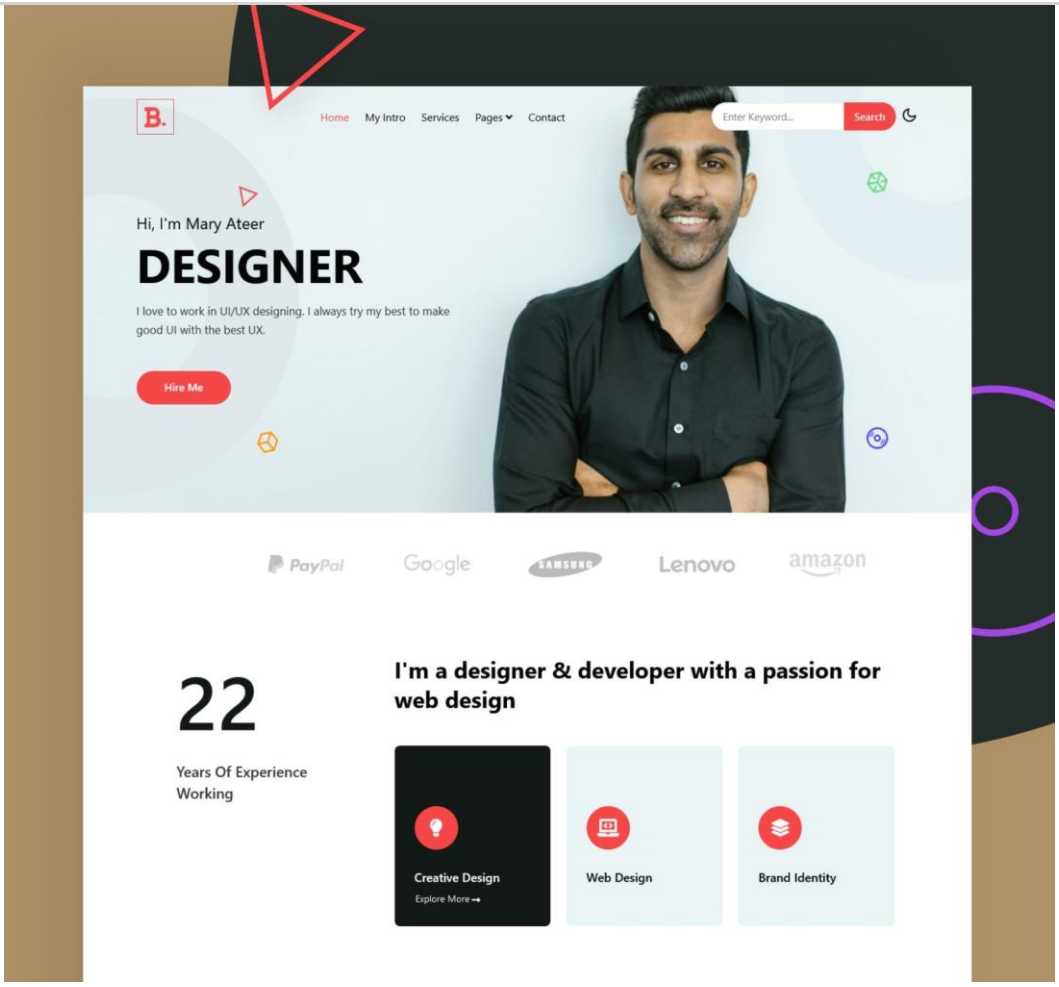

9 **Build a following Personal portfolio webpage using HTML and CSS.**

Part : C

10 **Create web pages with given animation effects**

Part: A

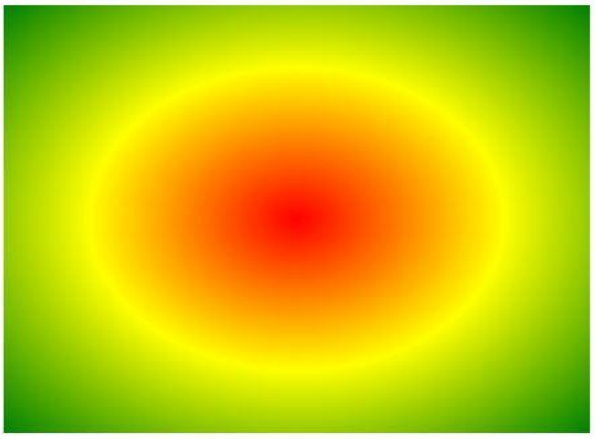

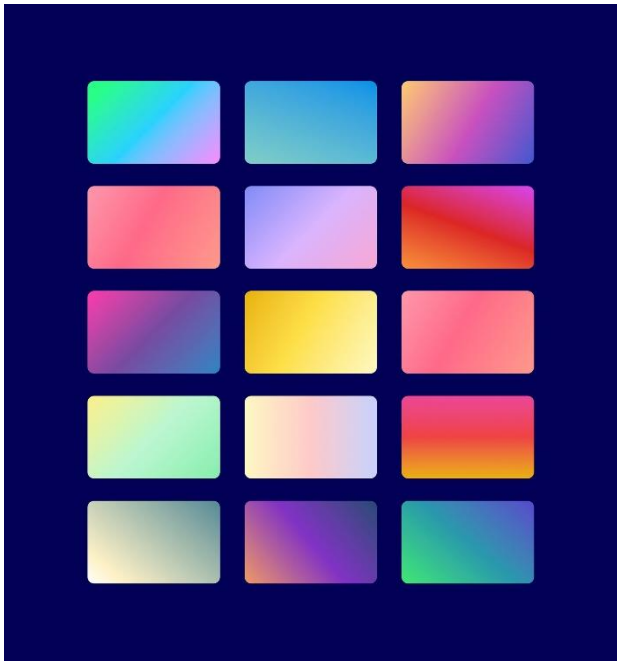

1. Changing the background color of the div from red to yellow.
2. Moving div from Left to right, right to bottom, bottom to left, and left to top.
3. Put a delay of 2s in the animation.
4. Change the animation-iteration count property of the program to run infinitely.
5. Change the animation direction property to run it in reverse order.
6. Change the value of the animation-timing-function property to change the speed of the animation

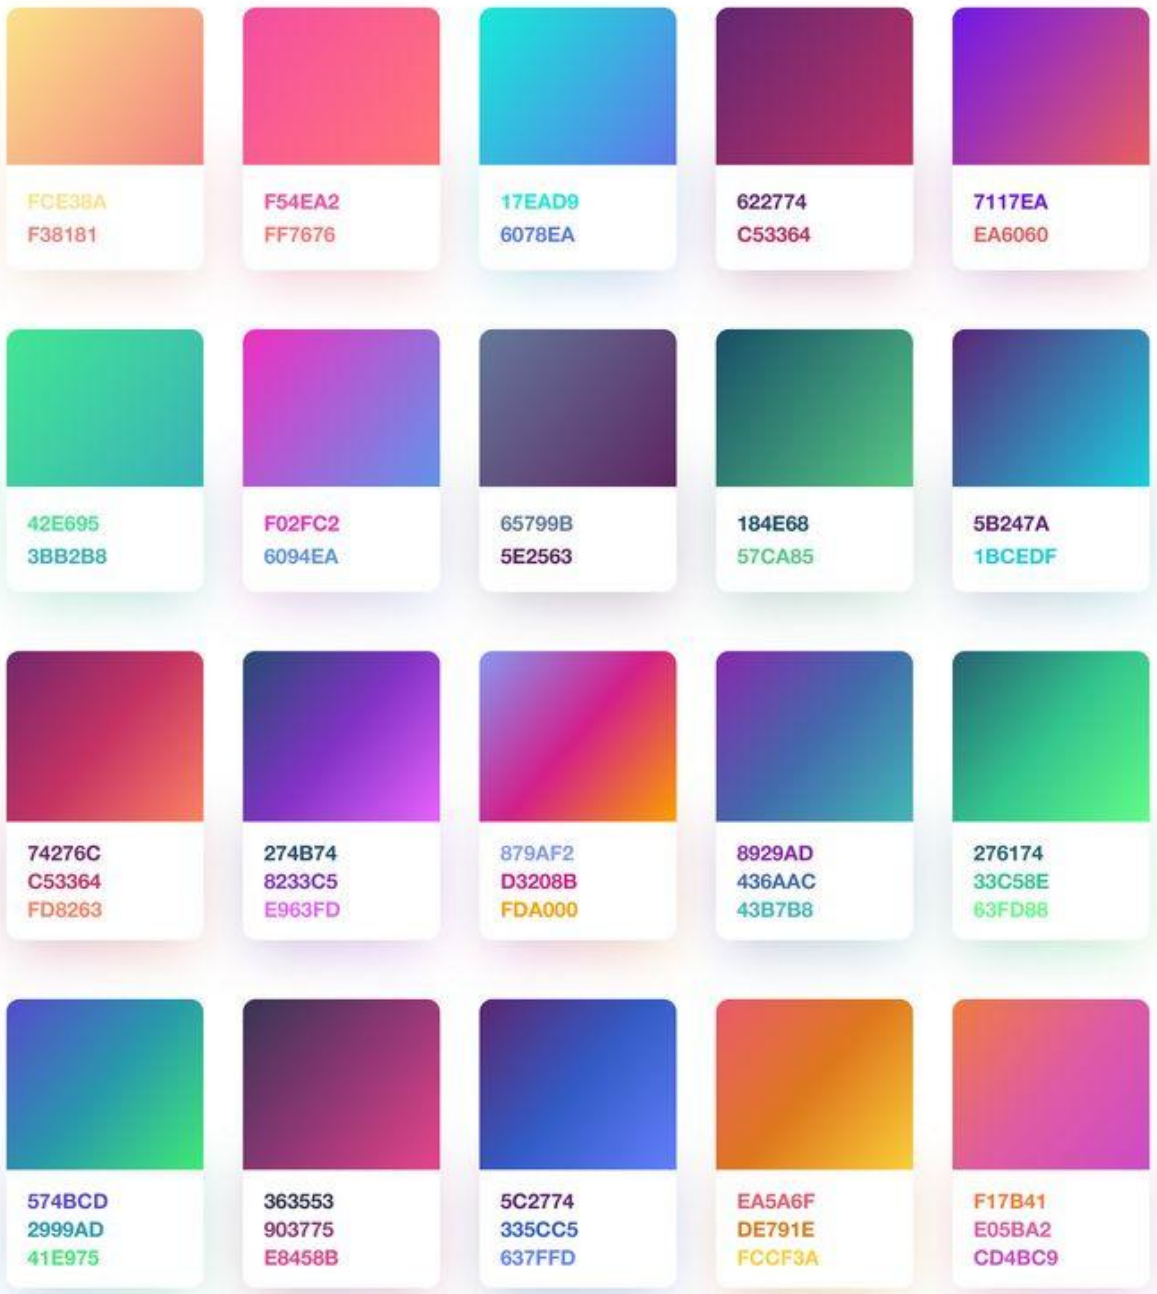

Part: B

1. Create a custom animation of your choice.

Part: C

1. Create an animation similar to the screensaver.

11	**Apply Media Queries on Practical No-8 and make it responsive.** 1. Layout part-A 2. Layout part-B 3. Layout part-C
12	**Demonstrate Gradients in CSS.** **Part : A**   **Part : B**  **Part : C**

13 **Create a web page using pseudo-classes and pseudo-elements having given effects.**

Part : A

1. Link after visited red color before visited orange color
2. Add special style(change color, font size etc.) to first line of paragraph
3. Add special style (change color, font size etc.) to first letter of paragraph
4. Change background color to yellow when user select particular text
5. Add special style to an element when user mouse over it.

Part : B

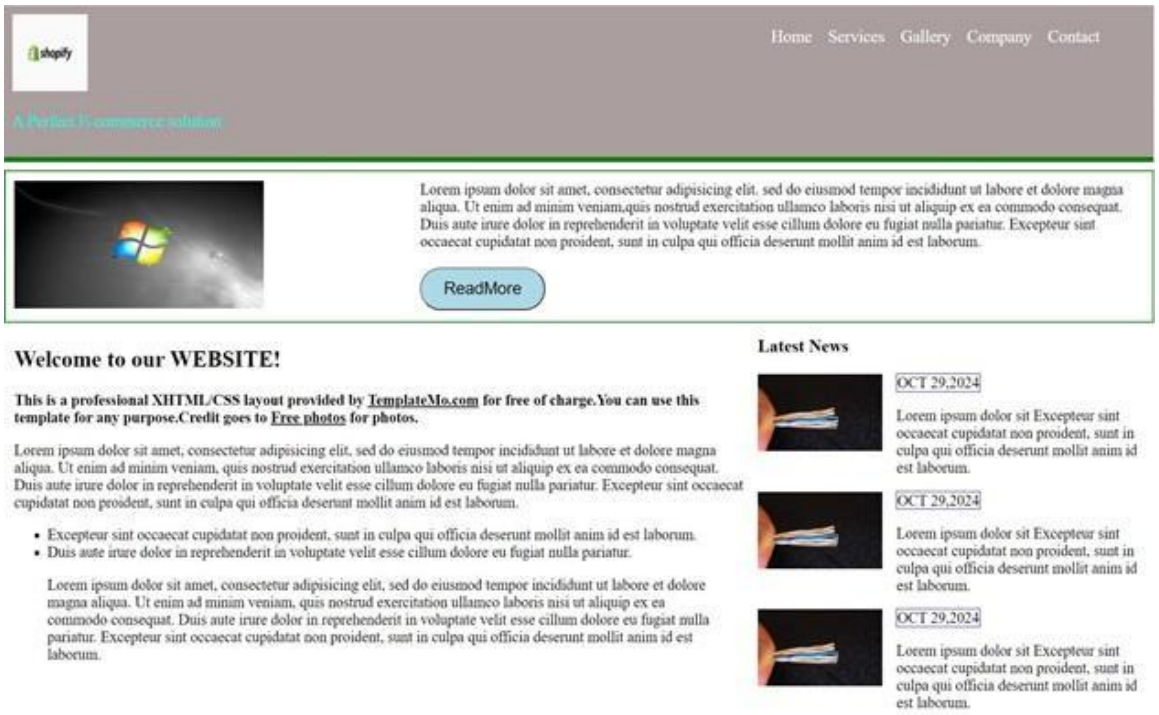

1. Using the :hover pseudo-class to change the appearance of links when hovered over, but limited to links within a specific container.
2. Applying styles to input fields when they receive focus using the :focus pseudo-class.
3. Utilize the :hover pseudo-class to highlight table rows when hovered over.

Part : C

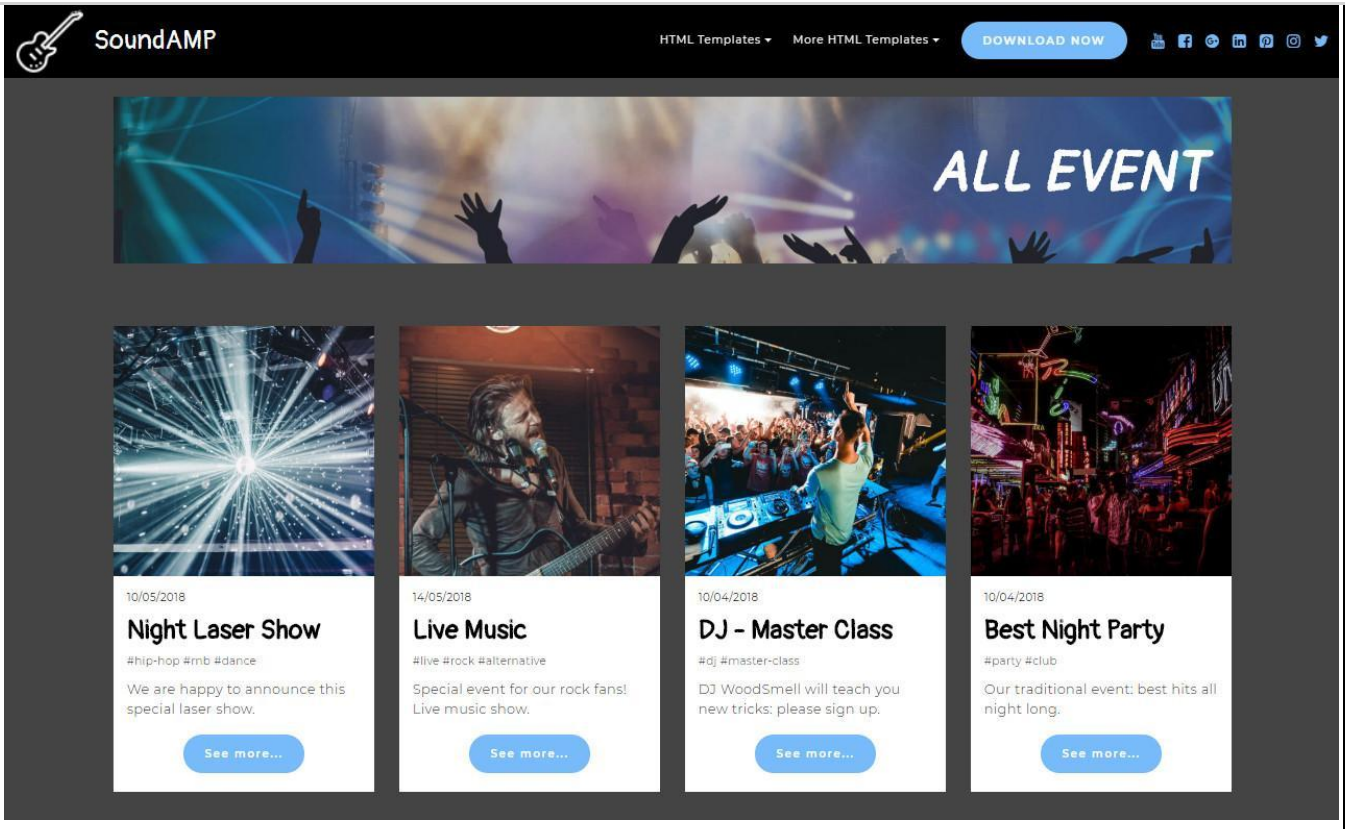

1. Employing pseudo-classes such as :valid and :invalid to style form elements based on their validation status, aiding in providing feedback to users during form submission.
2. Applying pseudo-classes like :active to interactive elements such as buttons and toggles to visually indicate user interaction when activated or clicked.
3. Using pseudo-classes such as :focus to improve accessibility by indicating the currently focused element, aiding users who navigate through a website using keyboard-only inputs.

14 **Build Below Homepage using HTML and CSS.**

Part : A

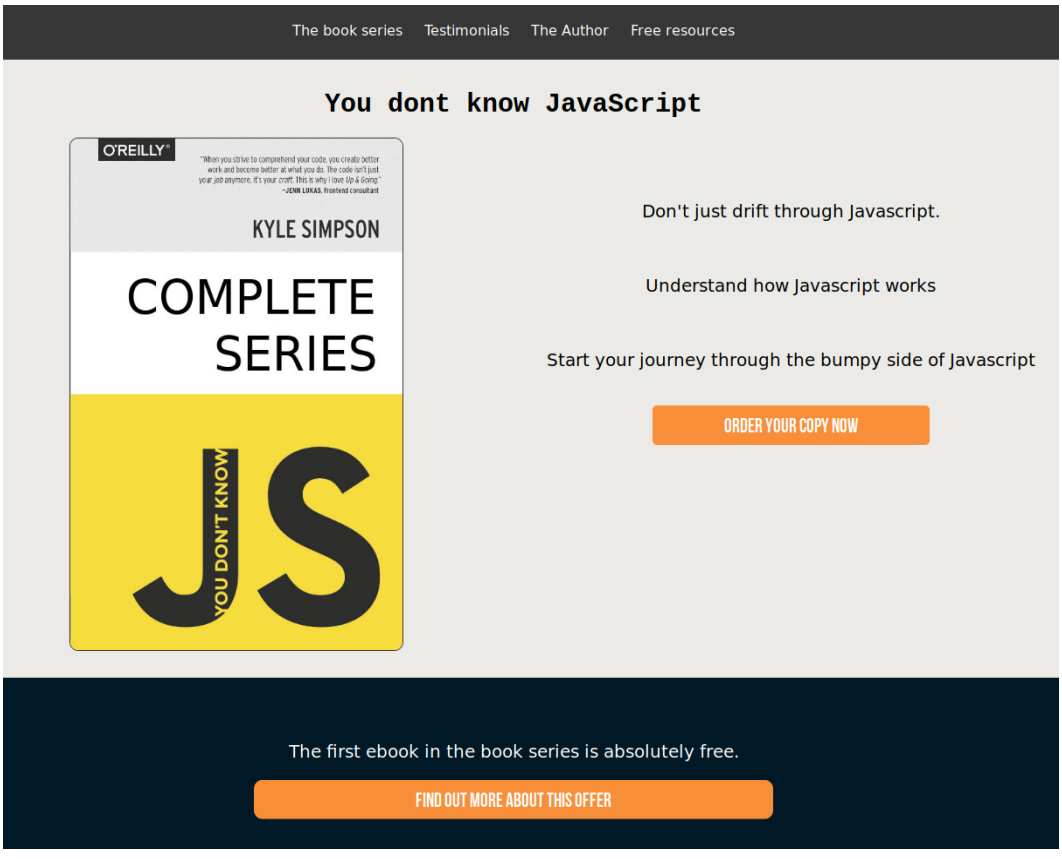

Part : B

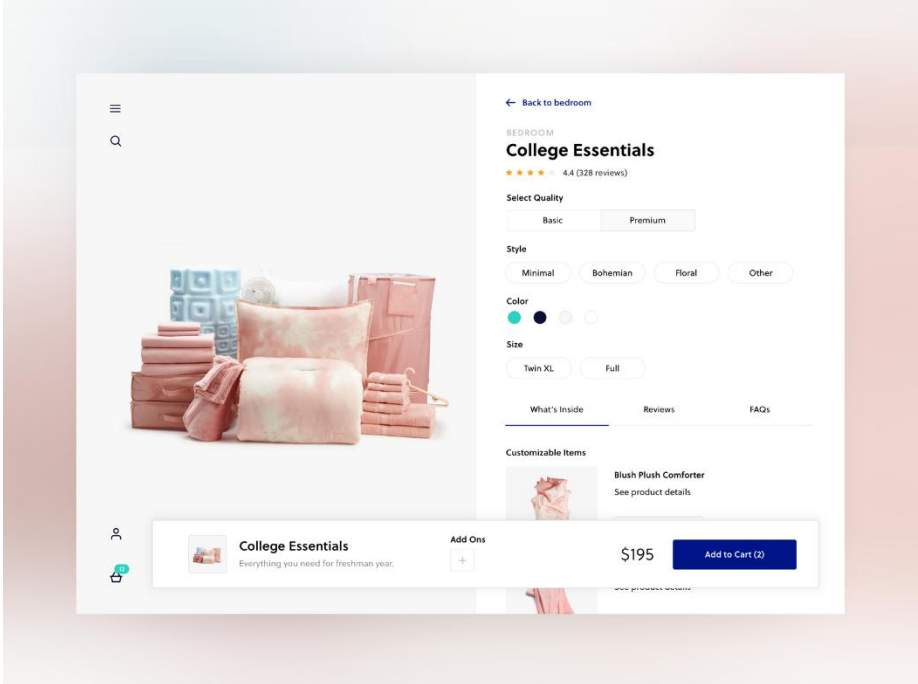

15 **Build a Product landing page using HTML and CSS.**

Part : A

Part : B

16 **Write HTML, Bootstrap code for following effects.**

Part : A

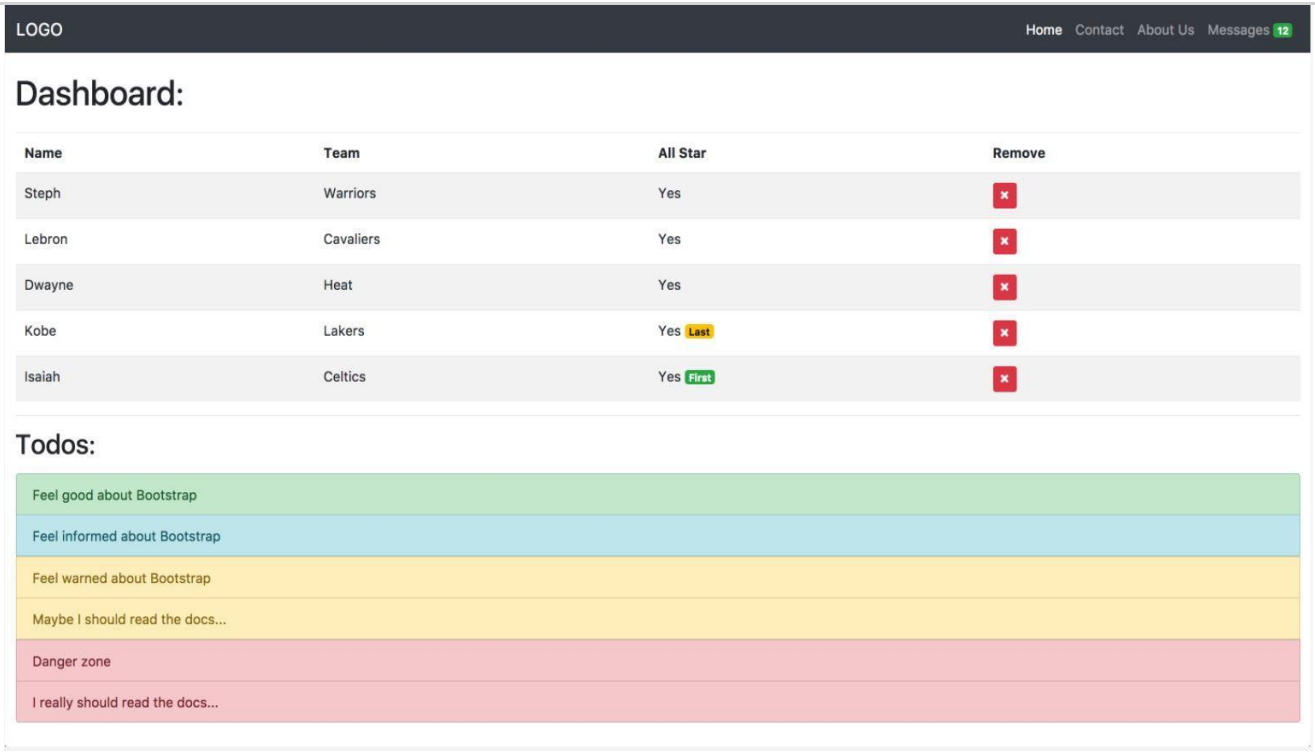

1. Use Bootstrap typography as per below image.

24	**Design the webpage given below** 
25	**Practicing Typography and spacing classes in tailwind** 1. Create a centered blog title with a subtitle below it. (A) 2. Make a card with a heading, paragraph, and button — make them visually spaced properly. (A) 3. Create a pricing card with a price highlighted using larger text. (A) 4. Show a quote in italic with comfortable reading line-height. (B) 5. Create simple nav links with equal spacing. (B) 6. Display a user's name, role, and description with proper vertical spacing. (B) 7. Create a page that displays all heading styles (H1–H6). (A) 8. Create a Newsletter signup box with proper spacing. (B) 9. Place two long text paragraphs side by side with readable spacing. (B) 10. Show a product title, short description, features list with proper spacing. (C)
26	**Practicing sizing classes in tailwind** 1. Create a 3-image gallery where images become full-width on small screens. (A) 2. Create a product card with a fixed size box containing an image + text. (A) 3. Create a page layout with a left sidebar and right content section. (B)

	4. Create 3 square boxes of di erent sizes. (A) 5. Create a banner that fills the entire screen height with centered text. (A) 6. Create a responsive text box that has a min width and max width. (B) 7. Create 4 cards that increase width on medium screens. (C) 8. Create a list inside a scrollable box. (C) 9. Create a profile image placeholder. (B) 10. Create a responsive video container that maintains 16:9 ratio. (B).
27	**Practicing background, lines, effects and filters in tailwind.** 1. Create a hero banner with a left-to-right gradient background. (A) 2. Create a card with a background image and white text overlay. (A) 3. Create a glass-e ect card on top of a colorful background. (B) 4. Create an image that becomes blurred when hovered. (A) 5. Create three boxes with di erent border styles and spacing. (B) 6. Create 3 cards each using a di erent shadow depth. (B) 7. Create a section with a background image and text readable using blend modes.(C) 8. Create 3 images, each with a di erent filter, and remove the filter on hover. (B) 9. Create a div with a pulsing animated gradient. (C) 10. Create a layout showing horizontal and vertical separator lines. (B) 11. Create a card that increases its ring size when hovered. (B) 12. Make a card that lifts upward when hovered with shadow increase. (B)
28	**Implementing layouts in tailwind.** 1. Implement below layout (A)  2. Implement below layout using tailwind (A)

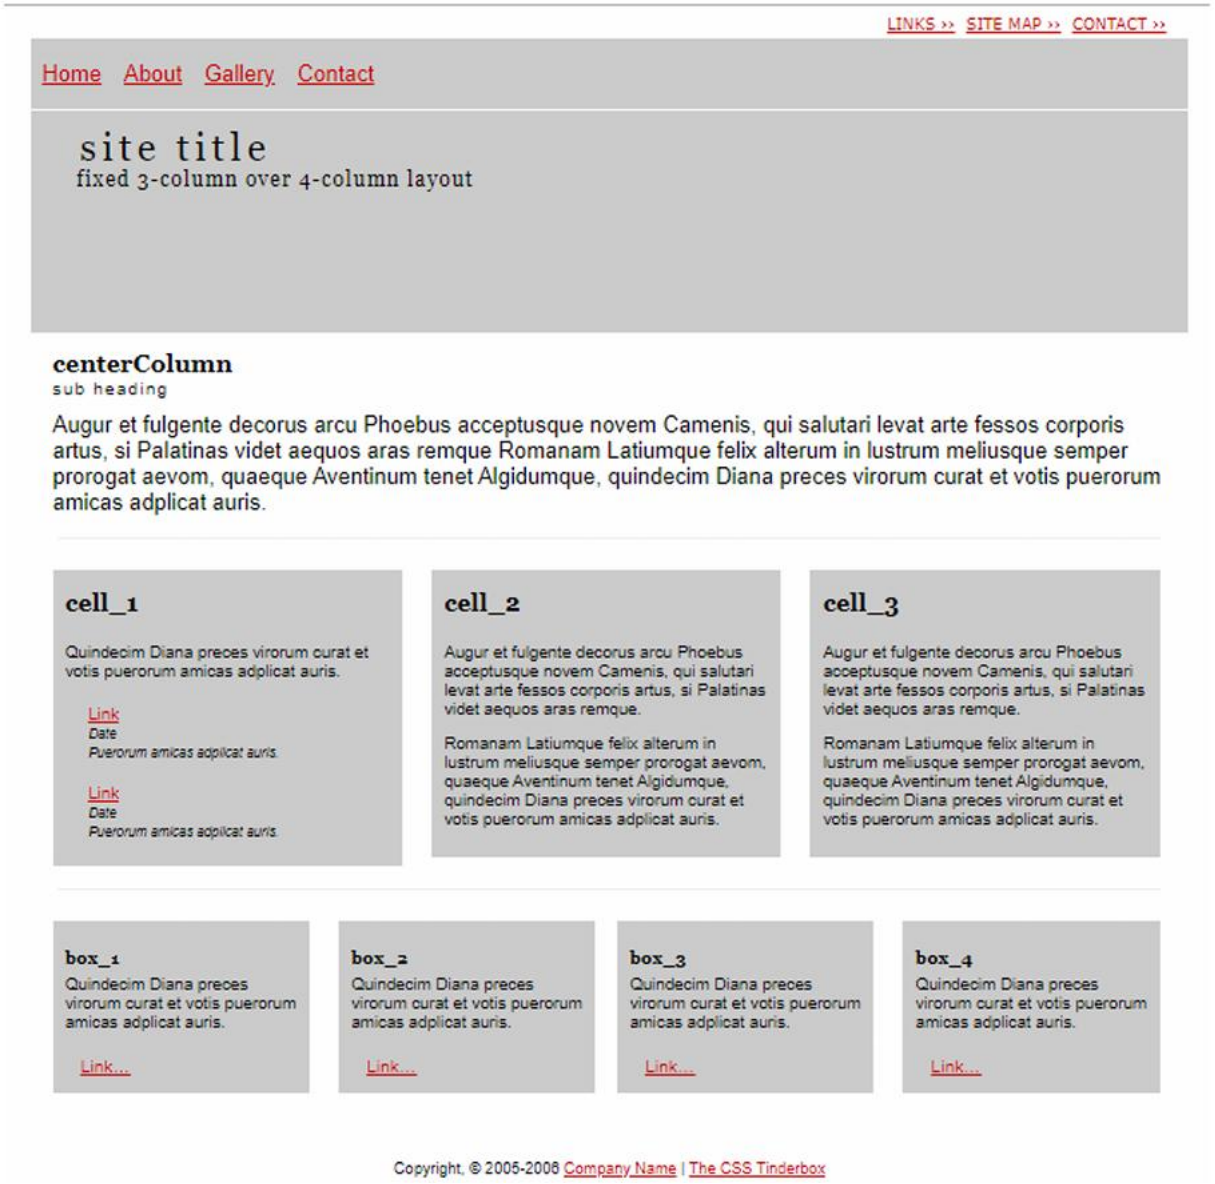

3. Implement below layout using tailwind (B)

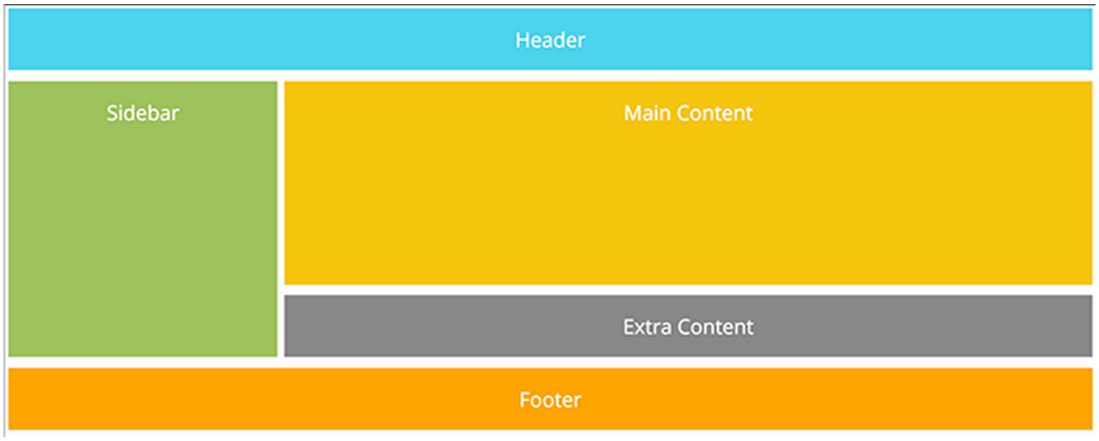

4. Implement below layout using tailwind (C)

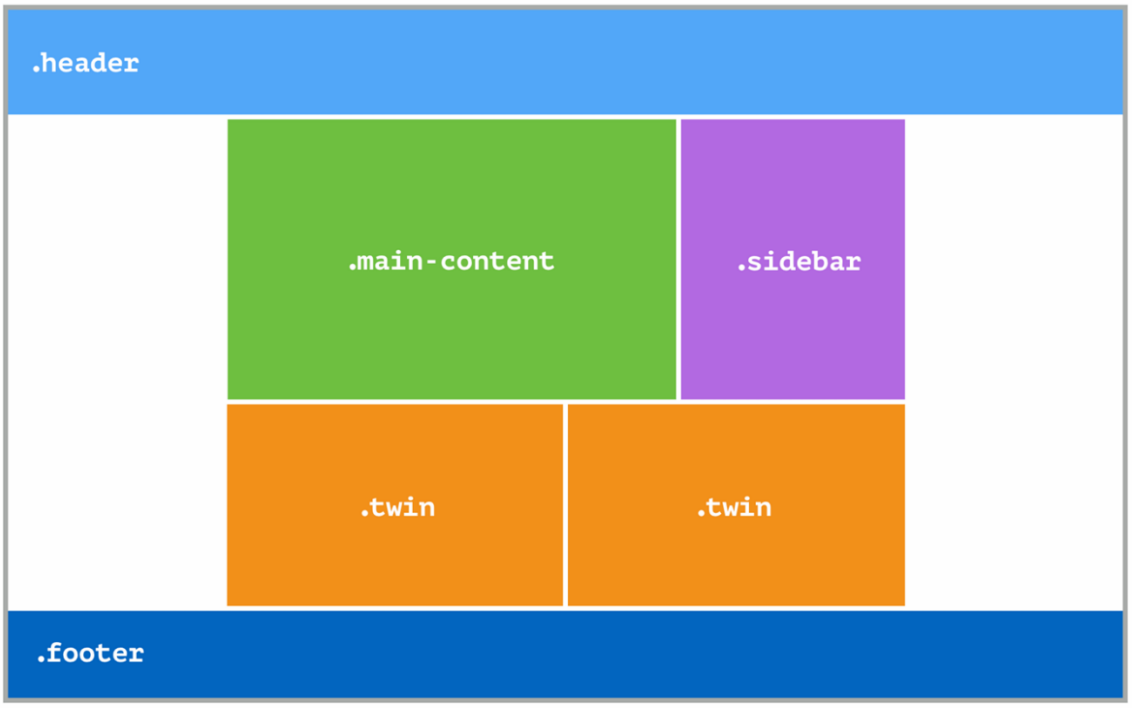

5. Implement below layout using tailwind (C)

6. Implement below layout using tailwind (A)

7. Implement below layout using tailwind (B)

	
29	**practicing transactions and animation classes in tailwind.** 1. Create a button that changes color and slightly scales up on hover. (A) 2. Make a hidden text fade in when card is hovered. (A) 3. Create an image that zooms in slowly on hover. (A) 4. Build a sidebar that slides in/out using a button toggle. (B) 5. Create a notification badge with a pulsing glow. (B) 6. Build a CSS-only spinner using Tailwind. (C) 7. Put a download arrow icon that bounces repeatedly. (C) 8. Simulate a typing e ect with blinking cursor. (C) 9. Create a section that fades in when page loads. (B) 10. Create a button with a ripple animation when clicked. (C)
30	**practicing table, svg, transforms and interactivity in tailwind.** 1. Create a simple table with borders and striped rows. (A) 2. Create a responsive table which scroll on mobile view. (A) 3. Display SVG icon with tailwind colors. (A) 4. Animated SVG Hover Color Change. (B) 5. Transform Scale on Hover. (B) 6. Rotate element 45° on Hover. (B) 7. Implement button with press e ect. (B) 8. Implement card with 3d hover tilt e ect. (C) 9. Design Interactive Checkbox Toggle State. (C) 10. Design Interactive Menu (show/hide on hover). (C)
